TERMINATION INSTRUCTIONS:

- 1) Slide heat shrink, ferrule and Environmental seal over end of cable prior to stripping cable. Ensure cable end is cut square.
- 2) When using automated stripping equipment, strip cable to dimensions shown. If automated stripping equipment is not available strip S1 and S3 only and trim excess shield at step 6. Care should be taken not to nick the center conductor and shield.
- 3) Install contact onto cable conductor flush with dielectric. Contact can be crimped or soldered. When crimping use K1759 positioner (selector 3) with hand tool M22520/2-01 or equivalent.
- 4) Fold all shields back perpendicular to cable using a tweezers. You may need to slit the aluminum foil before folding back.
- 5) Slide the connector onto the cable. Fold all shields back over the end of the connector.
- 6) Slide the ferrule over the shield until it is against the connector body. Trim any excess shield. Crimp the ferrule using Y187 die (0.156 hex) with hand tool M22520/5-01 or equivalent.
- 7) After crimping ferrule apply adhesive heat shrink and slide environmental seal over back end of connector.
